Proposed Corn Show Cancelled

In a letter from Mr. James Murray, District Agriculturist, Medicine Hat, the News is informed that the Corn Show scheduled to take place at Medicine Hat on November 13-14 has been cancelled.

This action has been taken on account of the season having been so unfavorable for corn growing and the amount of ripe corn being much smaller than for many years.

Mr. Murray goes on to say that there has been a limited amount of good corn ripened and those who have any should keep in mind the Provincial Seed Fair, which will be held in Calgary next January. At this fair classes will be provided for several of the commoner varieties. Prize lists may be obtained from W. J. Stephen, Field Crops Commissioner, Department of Agriculture, Edmonton.

In view of the serious shortage of seed corn for next spring, Mr. Murray urges the saving of all that will make seed.

In another column is an article on "Curing Corn For Seed".

In Lighter Vein

One of the troubles of the men of matrimony, is the cost of permanent waves.

Statistics show that knee-length skirts have reduced street car accidents fifty per cent. Wouldn't it be if accidents could be prevented entirely?

'Twas ever thus. There are about four hundred old papers on my desk, complained the editor, and someone came in and took the only one I want to look at again.

A prospective buyer, walked into the Red Sentry Garage the other day and said he would like to see a first class second hand car. Walt smiled and replied: So would I, brother.

When Mary was born they gave her a perambulator. Then she grew up a bit and they gave her a velocipede. When she got a little older they gave her a pony and cart. When she was in grammar school they gave her a bicycle. She went to college and they gave her a coupe. Then she got married and was given an airplane. Now she is starting in again with a perambulator.

Curing Corn For Seed

Not for many years has there been as little well matured corn in Alberta as there is this season. The shortage is shared equally by Saskatchewan and Manitoba, but also by Montana and North Dakota where a large part of our seed corn comes from each spring. Of late years we have been growing more and more for our own use, but our increasing acreage has made it necessary still to import most of what we require.

Next spring it will be more difficult than usual to get seed of suitable varieties from the usual sources and it is more than ordinarily important that we save as much as possible at home. It is especially important that some seed be saved of strains that have been grown here for a number of years and have become acclimated. Even if only a few ears can be secured these should be cured and stored carefully to carry on the strain.

Corn of the flint variety may safely be gathered for seed when it has begun to glaze and of the dent variety when it starts to dent. As soon as the ears have been gathered the husks should be stripped back and they should be hung up in such a way as to allow a free circulation of air around them to rapidly drive off the moisture that is on the cob and the grain. Ten or a dozen ears may be tied together in a bunch and hung up in the kitchen, the attic or some other place where they will not be subject to severe frost until they are thoroughly dry. The husks may be removed entirely and the ears placed in a rack made of chicken wire or on slatted shelves. It is important that the ears do not touch one another and that free circulation of air be provided to carry off the moisture quickly.

The vitality of corn is easily injured either by frost, heating or mould. A few degrees of frost will not penetrate the husk but it is safer at this time of the year to take no unnecessary chances and to gather everything that is ready and to store it safely away from frost. Mould develops quickly on account of the moisture in the cob and a mouldy ear is useless for seed purposes. The free air circulation drives this off quickly and insures strong vitality. After the corn is thoroughly dry it may be exposed to low temperatures but it can just as safely be kept in a warm dry room if it is available. It retains its vitality best on the ear and should not be shelled until near seeding time.

JAMES MURRAY,
District Agriculturist.

Teachers Will Meet at Hanna

A meeting of representatives of the teachers from the Hanna and Oyen inspectorates was held in Youngstown School last Saturday, when it was decided to hold a joint convention of the two districts at Hanna on November 5-7. An interesting program was arranged which will prove helpful to all teachers. It is urged that every teacher in these two inspectorates make a special effort to be present at this joint convention.

Miss Miss Oyen left last Friday for Calgary where she will attend Normal School.

Development In The West During The Past Four Years Shown By Interesting Figures

In the three years from 1920 to 1923, when the west was rapidly going to the low woods, there was added to the acreage under crop in the prairie provinces considerably over 1,000,000 acres. In this added crop area alone at average yields, the prairie provinces could feed all Canada, or in the alternative they could 61 annually, the total demand for wheat of London, New York, Paris and Berlin.

The above was but one of the striking facts cited by W. Sanford Evans, in his address on "The Pillars of Western Canada," given before the Winnipeg Sales Managers' Association recently.

In the five years, 1919-1923, according to Government reports, continued Mr. Evans, virgin prairie soil was added under cultivation to the extent of 424 acres, yet 424 acres, 37,800,000 acres under crop at the end of 1923 was only 20 per cent. of the cultivable area of the three provinces.

Development, he said, had been going on quietly in this country during the "boom years" of 1919-1923. Very few men realized until the actual results were placed before them in this graphic manner, and even then it was not until the ground truth of the position that had undoubtedly been in evidence during the past few years. Crop yields might vary, and the power of the dollar might shrink or expand, but the increase of fertile land under crop was increasing, and the measures of progress, and no other country in the world has shown so great a rate of increase in crop area during the past four years as has the three prairie provinces of Western Canada.

The "Pillars of Western Canada," cited were: Field and dairy products, livestock, transportation, power, manufactures and finance, and equally striking facts regarding the recent progress under each heading were vividly portrayed by Mr. Evans. The wheat output for instance increased from four million in 1920 to 45,200,000 bushels in 1923. The output of dairy butter in 1920 was 1,200,000 pounds, but in 1923 it was 22,250,000 pounds, an increase of 20 per cent. to the last three years. The total production of both creamery and dairy butter for 1923 being almost 25,000,000 pounds. The increase in production was still more remarkable, having more than doubled in the last three years. The total produced in 1923 was 7,312,293 bushels.

The railway mileage which in 1900 was 5,714 miles, has now increased to 15,000 miles. In manufactures, 5,481 persons were employed in 1900 as against 55,641 in 1923, or the value of manufactured goods in the same period from \$1,932,422 to \$3,017,044, the largest percentage of increase being in the manufacture of food and power products and slaughtering and meat packing. To care for the financing the business of the country, banks had increased in number from 122 in 1905 to 1,916 in 1924.

The statistics given by Mr. Evans covered not only the actual growth of the prairie provinces but also their wonderful potentialities.

A Community Centre
Miss Moore Jamison, the writer, speaking at the Canadian National Exhibition on young people's recreation, suggested the site of the farm kitchen as a community centre. A room large enough to hold 14 or 16 thousand in the farm place for a dance during the winter, when, with the aid of the telephone, neighbors on the concession may be easily summoned to the farm pond is cleaned up the boys and girls can use it for a skating rink in winter and a swimming pool in summer.

Developing Manitoba Mines
Further developments are reported in the Manitoba mining area. The Central Manitoba Mines, Ltd., capital \$2,000,000, is to take over the Lakeview, and the Bull Dog Lake holdings, whilst the Manitoba Copper Company has increased its capital from \$200,000 to \$2,000,000.

Lumbering In East Kootenay
It is believed that the 1924 output of timber in the East Kootenay forestry district will total one hundred and fifty million feet. Sixteen sawmills are now in operation and twelve more will be operating this fall. At present mills are averaging forty thousand feet per day.

With a dog as her only companion, an English woman recently travelled 20,000 miles into the heart of Africa.

Natural Resources Bulletin

Fire Hazards From Defective Chimneys, Overheated Stovespipes, and Other Causes

The Natural Resources Intelligence Service of the Department of the Interior at Ottawa says: The cause of winter fires will soon be here, when heat will be required in the homes. The kitchen stove and the heater will be removed into place for the winter, and at times of severe weather these stoves will be forced to their utmost to keep the home comfortable.

In many of the homes, especially those that have been built for some time, or those of a more or less temporary nature, there are many causes of fire danger. These may be, as built upon brackets. With the coming of winter, the woodwork, due to changing atmospheric conditions or wind pressure, the mortar in the chimneys may loosen and fall out, allowing sparks to fall and to burn the bricks into place, and on to shingle roofs, where they may cause a fire. It is well to go carefully over chimneys to look for any such places that may be detectable.

Another great source of fire danger is where stoves pass through walls and partitions. These should always be protected with wall hangers surrounded by a fire pipe, and not exposed to the open air. Overheated pipes are a very prolific cause of fire. Care should be exercised that stoves and pipes are in good condition, and well supported.

Other causes of fire due to heating are: Gasoline, kerosene, oil or gasoline, placed kindling in the oven or too near the stove, over-heating fire pots, drying clothes over stoves or pipes, and the careless lighting of ashes.

Last year insurance losses paid on farm fires amounted to over twenty-five per cent. more than the total premiums received, with no unprotected farm fires. The smaller municipalities where no fire protection is available, the losses amounted to 81 per cent. of the premiums collected. This situation constitutes a loss to the insurance companies.

An increased insurance rate can only result if such fire losses are not prevented. The insurance companies of the prairie provinces in the country is that many of the buildings are insufficiently insured, and the loss falls heavily upon the owners, many of whom are working hard to establish themselves in communities. The insurance companies are not yet replaced a burned home, while care may save a life-long regret.

Sugar Beet Possibilities

Sugar Beet Factory May Be Started In Southern Alberta

The possibilities of the sugar beet industry in Canada are as yet but vaguely realized. At present there are no beet factories in the Dominion. This company has factories at Wallaceburg and Chatham, in Ontario, and produces about 50,000 tons of refined beet sugar yearly. Experiments by the Division of Chemistry of the Experimental Farm system have unquestionably proven that beets of excellent quality for sugar purposes, raised from home-grown roots, can be grown in widely distant portions of the Dominion. It seems almost certain that some point in Southern Alberta will soon select as the site for a sugar beet factory in the near future.

The irrigation of Southern Alberta can be considered, exceptionally favorable for this purpose.

Salt Tougler Than Steel

Strands of wire made from ordinary rock salt by a Russian chemist are reported to be tougher than those made of steel. The inventor expects the process to aid in hardening and strengthening common metals, and believes that the use of salt will be of great value in the manufacture of materials that would permit moving machinery to travel at much greater speeds. The strands are said to put raw rock salt under high pressure, thus changing its form and increasing its flexibility and strength.—Rogers' Mechanical Engineer.

Titled Persons in Japan

The number of titled persons in Japan is now 952, according to figures just published by the Imperial Household Department. The lowest rank of 441; then came viceroys with 285; counts, 107; marquises, 28; princes, 19. This list does not include princes of the Imperial blood.

Profitable Keeping Of Poultry

Production Of Eggs Is The End And Aim Of The Poultry Business

Probably the greatest hindrance to the profitable keeping of poultry on the ordinary farm is the retention of eggs for food that are poor buyers, due either to their being too old or of a type to produce more than one egg. The production of eggs is the end of the poultry business in which the most profit can be made, so that a heavy egg-producing type is the type that is best suited to ordinary farm conditions.

Generally speaking, the pullet year is the most profitable period of a hen's life. It is advisable, therefore, either to mark the chicks when hatched, using a different mark for each year, or to band the pullets when they are put into winter quarters, so that in culling time the age of the different flocks may be seen at a glance and only those that are required for breeding purposes retained after the first year's production.

For the careful breeder the use of the trap-net is the logical means to cull the flock, but the ordinary farmer who keeps trap-nets, so that selection must be placed on physical characteristics. The high producer will be found to be of an active disposition, early off the roost in the morning, and late to go to roost at night, and always busy. Her head will be bright, her eyes clear, and her skin, smooth, pliable and of fine texture and a general appearance of health and vigor.

Cull all birds that show a lack of vigor, a sluggish disposition, a heavy, rough head with overhanging eyebrows, an inclination to break down behind, or that show heavy deposits of internal fat, as evidenced by a thick skin and an abdomen that is hard and firm to the touch. In contrast to this the heavy layer will have a thin skin and a soft, pliable abdomen will be soft and pliable. This last feature is one on which great reliance should be placed, but in culling reliance should be placed on a combination of features rather than on any one feature.

Decrease In Forest Fires

Intensive Educational Campaign Has Had A Beneficial Effect

With the exception of British Columbia there has been an extraordinary decrease in the number of forest fires in Canada during the present year, according to W. J. Kirby, Chief Forest Protection Officer of the Canadian National Forestry. This favorable condition Mr. Kirby attributed largely to the intensive educational campaign carried on through the newspapers of the Dominion and to the closer supervision of effect on the part of the railways with the forestry officers of the Government. Along the entire line of the Canadian National system, 175 fire hot beds reported up to the middle of September, about 200 of these having occurred west of Winnipeg, where weather conditions had been more favorable to forest fires than in Eastern Canada.

Of the 1,845,000,000 bushels of the globe about 600,000,000 are the principal European, American, and British, has the largest number of adherents.

Riches are the wings which sometimes make an angel of an ordinary girl.

A Clean Milk Supply

Quitting Ordinary Producers Follow Ordinary Sanitary Rules

Not many years, if ever, will it be possible to supply certified milk to large cities to the fullness of demand. On the other hand, small cities and towns cannot support pasteurization plants. Such towns must support such expense. What then is the answer? The answer is clean, unpasteurized milk. The answer all lies with the women of these towns. To you, reader, live in one of these. If so, do you know from where your milk comes? And under what conditions is it produced? If not, then out.

It is quite possible for careful milk, following ordinary sanitary rules, to produce milk as safe as certified milk under ordinary farm conditions. It is all in the will to do. Is the milk that comes to your home taken from a clean-looking cow by a clean man in a comparatively clean barn or shed? Is it taken directly from the cow in the milk pail, poured into a clean receptacle cooled by long or in real clean spring water? Or is it left to stand in a large can where all cows are milked, and where all the flies and bacteria in the air can reach it handily? Have the bottles been washed with very hot water and placed where dust or dirt cannot get at them until the dairymaid puts the milk in the cooler? Or has one of them been only half-washed—the one that was refilled by Jennie Jones, whose milk has been used for years?

On these things, if you take an interest, the farmer will take a greater interest—especially when you tell him how you are his place looks so clean. If you can't say that to him, BEWARE! If you have any kiddies you value, or a clean place or a house pasteurization. But remember clean milk cannot be produced at the same cost as unclean milk; and be glad to pay the clean milk producer two, three or four cents per quart over his unclean competitor. You may not see the immediate return, but when your neighbor who prices his milk a few cents cheaper is paying the doctor's bill, suppose you wonder once again.—From The Delinquent.

Wheat Exports Increase

Sixty Million Bushels Is Increase Over Previous Year

Wheat exports from Canada in the twelve months ended August 31, 1923, were 2,252,925,127 bushels, an increase of more than thirty million bushels over the corresponding period of the previous twelve months. The figures for the current period are 239,189,041 bushels, an increase of 22,925,127 bushels over the corresponding period of the previous twelve months. The estimated value is \$293,925,127 and \$293,925,127. Of this quantity two hundred million bushels went to the United Kingdom, an increase of 26,000,000 bushels over the corresponding period. To the United States the increase was 12,500,000 bushels in the 1923 period to 21,250,212 in the 1924 period.

To other countries Canada sent 67,292,687 bushels in 1923 compared with 52,753,127 in 1922.

Exports of wheat from the 12 months ended August 31, 1923, were 1,003,412 barrels, half a million barrels increase over the previous corresponding period.

A World's Fair will be held at Vancouver in 1927.

MOISTURE IN SILAGE MAKING

Application of Water Necessary When Fodder Is Too Dry

It is essential that there should be sufficient moisture present in fodder at the time it is being placed in the silo to provide the water requirement for the ensiling process and leave the surplus necessary to have ample moist, well-made silage after the fermentation and cooling processes have taken place. With sufficient moisture present in the ensiled mass there is little danger of the fermentation temperature rising too high. Cows in the glazed stage, or dried out through feeding, or long delays in harvesting require the application of water. Shortages in plant juices can be made up by the application of water in quantity sufficient to thoroughly moisten the fodder. Water is best applied by running a small stream directly into the fodder cutter while the fodder is being cut through and blown up into the silo. With water under pressure a valve to control the flow, and a section of garden hose for the purpose of setting the cut fodder in place, is a convenient arrangement.

Good Year For Sheep Raising

The greatest of wintering the cut fodder in place, is a convenient arrangement.

A British army regiment which recently returned from Constantinople has been away from England eighteen months and in the past four years the regiment had done duty in eight different countries.

Returning To Homeland Many Canadians Are Crossing Border From U.S. To Canada

Potato Marketing

Decreased Potato Acreage In Saskatchewan and Light Yields Expected

With a decreased potato acreage in Saskatchewan, and in addition the likelihood of a light yield in some parts of the province, potato growers should not have far to look for a market this year, according to W. Waldron, acting markets commissioner in the Provincial Department of Agriculture.

In order to facilitate marketing, the co-operation and markets branch will, in former years, co-operate with the growers and compile lists of offerings for distribution among the dealers and wholesale buyers. The grades as established by the Dominion Government are fairly well known, and all potatoes sold must be marketed under such grades. Copies of these regulations may be obtained from the fruit and vegetable inspector, post office building.

During the next few weeks S. C. Hetherington, D.S.A., will be calling on most of the prominent potato growers in the province for the purpose of inspecting their crops and to give them assistance in marketing. He is also invited to list their offerings with the markets branch, department of agriculture, Regina, stating fully the quantity available, the variety, the grade, and nearest railroad station. Where possible carloads should be made up co-operatively, but where it is possible for three or four farmers to make up a carload of one variety the sale is considerable. In marketing ordinary commercial stock, we can quite probably have in mind the farmers of Canada, a very large sum of money. The buyers are not likely to be in a position to purchase when it is possible to purchase the animals. Every mark left on the hog, even a buggy whip, at the time of shipping, shows itself on the side of bacon. When marketing, listing and listing. It is estimated that from three to four hundred thousand hogs are reduced in weight by the time they reach the packing plants by upwards of \$500,000, a loss for which the farmer has to pay. Much of this could be prevented if every hog raiser would pack his animals with proper loading clothes and by careful loading at the shipping point.

Handling Livestock In Shipping

Care Should Be Taken In Handling Livestock To Prevent Depreciation In Value

Rough treatment of market stock, whether it be cattle, hogs or sheep, costs the farmers of Canada a very large sum of money. The buyers are not likely to be in a position to purchase when it is possible to purchase the animals. Every mark left on the hog, even a buggy whip, at the time of shipping, shows itself on the side of bacon. When marketing, listing and listing. It is estimated that from three to four hundred thousand hogs are reduced in weight by the time they reach the packing plants by upwards of \$500,000, a loss for which the farmer has to pay. Much of this could be prevented if every hog raiser would pack his animals with proper loading clothes and by careful loading at the shipping point.

In shipping cattle the loss from pouring and bruising amounts to a large sum also. A leader learned by the secretary of the Minister of Agriculture at Ottawa, places the loss on cattle from rough handling and going at the head of the train, at a loss of \$100,000 annually. It is recommended that the growth of horns be prevented on calves by treatment with caustic potash and that the horns be removed from larger cattle by mechanical means.

Moisture In Silage Making

Application of Water Necessary When Fodder Is Too Dry

It is essential that there should be sufficient moisture present in fodder at the time it is being placed in the silo to provide the water requirement for the ensiling process and leave the surplus necessary to have ample moist, well-made silage after the fermentation and cooling processes have taken place. With sufficient moisture present in the ensiled mass there is little danger of the fermentation temperature rising too high. Cows in the glazed stage, or dried out through feeding, or long delays in harvesting require the application of water. Water is best applied by running a small stream directly into the fodder cutter while the fodder is being cut through and blown up into the silo. With water under pressure a valve to control the flow, and a section of garden hose for the purpose of setting the cut fodder in place, is a convenient arrangement.

Good Year For Sheep Raising

The greatest of wintering the cut fodder in place, is a convenient arrangement.

A British army regiment which recently returned from Constantinople has been away from England eighteen months and in the past four years the regiment had done duty in eight different countries.

Returning To Homeland

Many Canadians Are Crossing Border From U.S. To Canada

It has always been realized that probably the greatest hindrance to a more rapid national development in Canada has been the proximity of a great developed neighbor to the south exerting a powerful lure upon Canadians at times of temporary depression through the latter prosperity and more advanced and varied progress, and his ability to offer the intellectuals and technically trained of the Dominion positions the number of which were strictly limited in Canada. This trend, varying in volume, has been in progress throughout Canadian history, and since it has always been of a consistently high constituency in the United States has never been restricted in any manner. According to the last United States census there were 1,117,745 American citizens of Canadian birth, of which 575,745 were French, which gives some indication of how Canada has suffered by reason of her being nearer to a later start in economic development.

A great many of these sons and daughters are inevitably permanently lost to Canada. They have been enriched the Republic and will frequently be found occupying important and responsible positions in the Republic, and they are also invited to list their offerings with the markets branch, department of agriculture, Regina, stating fully the quantity available, the variety, the grade, and nearest railroad station. Where possible carloads should be made up co-operatively, but where it is possible for three or four farmers to make up a carload of one variety the sale is considerable. In marketing ordinary commercial stock, we can quite probably have in mind the farmers of Canada, a very large sum of money. The buyers are not likely to be in a position to purchase when it is possible to purchase the animals. Shortages in plant juices can be made up by the application of water in quantity sufficient to thoroughly moisten the fodder. Water is best applied by running a small stream directly into the fodder cutter while the fodder is being cut through and blown up into the silo. With water under pressure a valve to control the flow, and a section of garden hose for the purpose of setting the cut fodder in place, is a convenient arrangement.

Good Year For Sheep Raising

The greatest of wintering the cut fodder in place, is a convenient arrangement.

A British army regiment which recently returned from Constantinople has been away from England eighteen months and in the past four years the regiment had done duty in eight different countries.

TRADE PACT BETWEEN CANADA AND AUSTRALIA

Ottawa.—It is announced by the Prime Minister that the negotiations with Australia which have been carried on for several months by Hon. James A. Robt., Minister of Finance, and Hon. Thos. A. Low, Minister of Trade and Commerce, have resulted in the conclusion of a trade agreement between the two dominions. The agreement is of a reciprocal nature, granting the Dominion of Canada preference in many lines of export. In return for which Canada agrees to extend equally favorable treatment to various Australian products.

No details of the agreement which has been concluded were made public, but no indication was given of the products which would be granted preference by Australia or those which would receive favorable treatment in Canada.

"It is anticipated that the agreement will do much to encourage trade along reciprocal lines and to cement further the cordial relations existing between these two parts of the empire," states the official announcement.

Hard Problem For Turkey

Country Has No Funds to Indemnify Turks Returning From Greece

Constantinople.—Turkey has a hard problem on its hands, according to reports sent back to Turkey from Greece. Turkey is in exchange for the 2,500,000 Greek subjects elected from Anatolia.

There is a lack of funds to indemnify the Turks who came back home and no money to erect houses and put them back on the land in Anatolia. "Turkey for the Turks," still continues to be the slogan of Nationalist politicians. It has been to the war for so many years that it offers poor returns to Turks who have more fortunately located in Macedonia and other parts of Greece.

Endowment Fund For Washington's Home

Campaign Undertaken in U.S. Toward Maintaining Survivors' Manor

London.—The Survivors' Initiative which administrators, Rogers' Manor, near the home of George Washington, has been informed of the successful outcome of a campaign undertaken in the United States by the Society of Colonial Dames to raise an endowment fund of \$100,000, the income from which will be expended toward the maintenance of the manor as a shrine of United States patriotism. No formal announcement of the gift has been made public here.

Planning Trans-Pacific Flight

Project Being Discussed By Pan-Pacific Union, Honolulu

Honolulu.—Plans for a trans-Pacific flight by airplane from San Francisco to the Philippines and Australia, with several Pacific countries and the army and navy co-operating, are being announced by the Pan-Pacific Union. A visit might also be made to New Zealand. The purpose of the flight will be to study the possible establishment of five or more permanent air lines linking countries bordering on the Pacific Ocean.

Avalanche Sweeps Swiss Village

Twelve Houses Crushed and Number Of Inhabitants Killed

Berne, Switzerland.—A landslide obliterated a large part of the mountain village of Semio, in the Tessin Canton, crushing twelve houses into ruins and partially burying them. The destruction was increased by a wild mountain stream which overflowed because of the landslide and inundated part of the village. A number of inhabitants were killed or swept away.

Fire Prevention Week

Ottawa.—Fire prevention week was proclaimed Sept. 24. It begins Sunday, October 5, and ends Saturday, October 11.

Stiff?

Mind's Members up stiff joints and more muscles. Splendid for rheumatism and backache.

KENDRICK'S

W. N. U. 1514

Prince In Favor Of Second Season At Wembley

London.—Great interest is expressed by the English press at the announcement that H.R.H. the Prince of Wales, when staying in Alberta and Saskatchewan this summer, will act in his capacity as President of the British Empire Exhibition, in trying to induce the Canadian Government to renew and support a second season at Wembley. It is recalled that the Prince, by his interviews with Right Hon. W. S. Fielding and Hon. Ernest Lapointe, of the Canadian Government, had much to do with securing Canada's official participation in the exhibition. The London Star designates the Prince "our commercial traveler."

Will Be Test Case

Shareholders of Home Bank Claim Grain Growers' Holding Not Valid

Toronto.—Arguments against the payment by shareholders in the defunct Home Bank of double liability for the failure of the bank's assets will be heard here on November 17 next. One of the points which will be heard at the hearing will be the acquisition of the assets of the Banque Internationale which will be declared by court for the appeal to have been null and void. An expenditure of about \$100,000 is involved.

It is also alleged that all persons who hold shares sold by the Grain Growers' Grain Company, Limited, and the United Grain Growers are not shareholders in the Home Bank, because such shares were not validly created, issued or allotted.

It is also alleged that the Home Bank entered into an "illegal, improvident, pernicious, improper, highly speculative, vicious, fraudulent and ultra vires" contract or agreement with the Home Savings and Loan Company. It is claimed that this was not a bank, and that the Home Bank million dollars paid for its assets cannot be charged against the Home Bank shareholders.

A. W. Ballantyne, K.C., who is appearing for the liquidators of the Home Bank, stated that a test case would be made, and upon this the liability of the others would hinge. The cost of the test case would be paid out of the bank's estate. Messrs. Bain and O'Donoghue will counsel for the shareholders.

Always Pleased To Visit Western Canada

Looked Forward To Rest on Ranch Says Prince

Winnipeg.—On his way to his ranch in Alberta, the Prince of Wales stopped off in Winnipeg for three hours. His programme was quite informal and brief, and consisted of a tour of the Canadian National station here was met by Mayor Farmer, who expressed his pleasure and the gratification of the Prince's visit to the city of St. Louis. The Prince said he was always pleased to visit Western Canada, and that he was looking forward to the rest and recreation to be obtained on his ranch. A representative of the Prince was on the platform to meet the Prince, and there were present members of the railway staff and a few citizens.

Greece Preparing To Pay Debts

New York.—Greece is preparing to dispatch a special mission to the United States for the purpose of securing and concluding arrangements for the gradual repayment and extinction of the war debt to the United States. It is to start immediately after the parliamentary elections next month, and will be headed, according to present arrangements, by Georges Rousset, the present Minister of Foreign Affairs.

Want Western Director

Saskatoon.—One of the two vacancies on the Canadian National Railway Board of Directors should be filled by a Saskatchewan man, a Saskatchewan Board of Directors delegation will tell the Board of Directors at its city early in October. A large proportion of the C.N.R. lines lie in Saskatchewan and Alberta, but these provinces have no direct representation among the directors.

Manitoba Crops

Winnipeg.—There is decidedly more agricultural optimism in Manitoba than at this time of the year. It is disclosed in a statement issued by the Provincial Department of Agriculture. A small percentage of grain crops to be cut, and in Southern Manitoba about 50 per cent of the crop is threshed.

No Women Justices

Melbourne.—The Legislative Council of the State of Victoria, by a vote of 18 to 8, rejected the Government bill providing for the appointment of women as justices.

Ukraine Wants Western Horses

Profitable Trade Assured If Financing Can Be Arranged

Calgary, Alta.—Whether the Ukrainian Government will buy 2,000 horses in Alberta and Saskatchewan this year depends on two factors, namely, its ability to satisfy the Dominion Government that it can guarantee the financing, and, second, its ability to make arrangements with the transportation companies.

The Ukrainians want the horses and has authorized Harry Hopburn, of Montreal, to make the purchases, but it "has offered only \$25 a head for transportation from the point of purchase to Odessa, whereas it has been found the transportation, which includes the care and feeding of the horses enroute, will cost \$45 a head.

There is a great shortage of horses not only in the Ukraine but throughout Europe on account of the ravages of the war, and it is stated that only the necessarily high costs of transportation and difficulties in arranging for the handling, prevent a profitable trade with Western Canada.

BERLIN WOULD ENTER LEAGUE ON CONDITIONS

Berlin.—The German Government is drawing up an announcement setting forth the conditions under which Germany will apply for membership in the League of Nations. The memorandum will be sent to all the governments which are members of the League Council, and will set forth the German position and conditions. The memorandum, it is understood, will ask definite enlightenment as to whether Germany will be offered permanent "seats in the council of the league and it will expressly declare that Germany's entry into the league depends in way largely realisation of her war goal.

It is also understood that the memorandum will request information as to the obligations Germany would undertake through membership, especially regarding the transport of troops through Germany, or the assistance of a neighboring state which might be attacked by a third power.

On this point the German Government contends that "such transport would involve a breach of neutrality, especially toward Russia, and that it might lead to hostilities.

The memorandum, which probably will be submitted to the Governments concerned at an early date, will first be examined by the cabinet and by the Government of the federal states.

New York Bankers Looking For Business

Interested In Prospective Borrowing By Canadian Provinces

New York.—The Tribune says that the bond market is much interested in projected Canadian financing. Quite an amount of credit is being borrowed by the Canadian provinces and municipalities is in sight and New York bankers are hoping to get a large share of the business. It is said that preliminary enquiries were reported in connection with a Manitoba borrowing loan of \$12,000,000 and the City of Toronto asked for bids on a \$15,000,000 loan.

Settlers Leaving Drought Area

Edmonton.—About 100 settlers' families have already moved out from drought-stricken areas in Southwestern Alberta to new locations in various parts of the province, and inquiries and applications are still coming in daily. The movement, it is thought, is now well under way and is likely to assume somewhat large proportions, though the selling sort of anything like a stampede.

Would Continue Act

Toronto.—The principle of Toronto public schools have gone on record as favoring a continuance of the Ontario Temperance Act. Year that earlier session to Intendants would increase the traffic fatalities among school children being a great problem place in the programme to the federal states.

To Leave Berlin

British Ambassador to Germany, who, it is understood, will resign as soon as the pact of London is in smooth working order.

Border Smugglers Fined

Three U.S. Citizens Must Pay Double Duty

Moose Jaw.—Customs officials are taking steps to check smuggling, which has been carried on on a large scale in Southwestern Saskatchewan. As the result of the activity of the Federal Immigration and Customs Officers, Norval Shumway, of Hildon, N.D., and Ferdinand Schirmer, and Frank Bloomquist, also American citizens, were fined for failing to register their entry from the States. The three men were also fined under the inland revenue act. Bloomquist and Schirmer, who operated their smuggling on a partnership basis, were each fined \$50 and ordered to pay double duty.

Shuttlworth was found to have been smuggling radio sets into Canada. He was reprimanded and charged double duty on the sets.

C. Livingston, of Lethbridge, also near the border, was found guilty of bringing in contraband automobiles. Canada and he was charged double duty.

British Navy Not At League's Disposal

Home Secretary Makes Clear Statement To Dispel Misgivings

Geneva.—The clear and precise statement of Mr. Henderson, British Home Secretary, on the attitude of the British delegation on the question of the use of the British fleet in enforcing sanctions against an aggressive nation. It is believed, will dispel any misgivings which may have been entertained in connection with the matter in the earlier stages of the discussion by the committee of disarmament.

Mr. Henderson declared the British Government had no idea of placing British troops or ships at the disposal of the League of Nations. He said that to use it as thought fit, nor even had such an idea, and there was no intention whatever on the part of the Government of converting the league into a war council and imposing on it the burden of conducting military campaigns or naval operations.

New Discovery On X-Ray Treatment

Secondary Radiation's Chief Curative Agents Says Philadelphia Physician

Wilkes-Barre, Pa.—Discovery that the secondary radiations from the Roentgen tube, and not the primary X-rays were the effective ones in the treatment of malignant diseases may open the way for more successful treatment of cancer. Dr. Donald H. Brown, of Philadelphia, president of the American Public Health Society of Pennsylvania in annual convention here. Dr. Brown said he had found that the Beta rays, not the Gamma rays of radium he had used, had been the effective ones in the treatment of cancer and other diseases and the application of the new principle was constructive and not caustic or destructive "as is often the case in radium treatments of cancer at present."

Losses By Cattle Disease

Brussels.—The foot and mouth disease which is raging among the cattle of Belgium has thus far caused losses estimated at \$6,000,000 francs. In August, the total number of cattle affected was 28,282. A large number of hogs also were stricken.

To Make Speed Test

Washington.—The navy's huge dirigible, the Shenandoah, will leave Lakehurst, N.J., on October 3, for a "speed test" across the country, carrying for the first time to the Pacific coast, the navy department announced.

Victorian Nurses Award Thirteen Scholarships

Ottawa.—The central board of the Victorian Order of Nurses for Canada announces the award of thirteen scholarships of \$400 each, to qualify students to graduate in standard hospital training schools, which will enable them to take the university courses in public health at the several Canadian universities offering such a course. The awards for the university year 1924-25 include Miss Hazel Brunner, Edmonton, Alta., to the University of British Columbia.

Philippines Not Exempt

U.S. State Department Rules Volstead Act Must Be Observed

Washington.—The eighteenth amendment to the United States constitution has stretched out its forbidding hands to the Philippine Islands. Under a legal decision holding shipment to the islands of liquor for beverage purposes to be contrary to the amendment, the State Department has announced that the Philippine Islands are not exempt from the Volstead Act.

Disclosure that such orders had been issued last June was made by the department on receipt of dispatches from Manila indicating a belief on the part of Governor Wood, that the Philippines were exempted from the Volstead Act, which a department of Justice decision had been to the contrary. The dispatches reported that General Wood had requested that the United States consul at Hong Kong be instructed to issue bills of health to vessels sailing from that port for the Philippines with liquor cargoes on board. He believed, however, that such clearance was based on a misunderstanding of the law.

MINERAL RICHES OF NORTH MAY BE EXPLOITED

Quebec.—The long discussed question as to whether the Dominion of Canada will ever benefit materially from the mineral riches of the northern islands in the vicinity of the Arctic Circle, many of which have been claimed for Canada in recent years by Captain James Ross, an adventurer and Arctic explorer, would appear to be more definitely settled with the arrival of the steamer Arctic at this port.

There is every reason to be enthusiastic over the almost limitless possibilities in regard to the mineral development of the north country, was the keynote of statements made by members in expedition to the Canadian Press, the information being given out that, perhaps, in a short period of time, agents of the Federal Government may take steps to open up and develop what are considered to be huge treasures in mineral ore.

It is stated that the Northwest Territories and Yukon branch of the department of the Interior, stated, in an interview, that although it would be difficult to get the people to speak with exactness as to the wealth of the northern islands, he and all concerned with the question of the opinion that the resources there might prove to be of such a vast and wealthy nature as to astonish the civilized world. The Arctic was as far north as Kane Basin, on the northeastern coast of Greenland.

Study Canadian Methods

Canadian Fur Farming Methods Being Studied By American Officials

Washington.—A special study of Canadian methods of fur farming is being made by the department fur resources of the United States Biological Survey. The attitude of the Canadian Government toward the industry is also being studied.

Frank G. Ashbrook, chief of the department, has been in Ottawa, Quebec, Montreal and also in Prince Edward Island, recently, to study fur farming methods employed in these places. Officials here say that the interest taken in fur farming by the Canadian Government is producing substantial results. Lessons learned in Canada will be applied to fur farming in the United States, including Alaska.

Meted Out Swift Justice

Montreal.—Swift justice was meted out to Armand Paul, alias Tremblay, by Chief Justice Desjardins in the arrondissement court. He was arrested at 3.30 in the morning charged with stealing \$7,000 certificates, pleaded guilty at 10 a.m. and at 11 o'clock was on his way to St. Vincent de Paul penitentiary to which the judge had sentenced him to remain for five years.

BETTER TIMES ARE IN SIGHT FOR DOMINION

Ottawa.—"Your children will live to see Vancouver the greatest city on the Pacific coast," declared Roger W. Babson, head of the Babson Statistical Organization, New York, in addressing the Ottawa Board of Trade.

"Europe has shot her bolt. The great trade is now with the Orient. The great market of the world will be on the Pacific rather than on the Atlantic," he added in explaining his prophecy. "Canada," he added, "is destined to be a great exporting country. Your country has the greatest wealth of raw materials in the world. The thing for Canada now is to determine to control the world markets by selling these fundamental natural resources. I believe I will live to see the day when the United States will not export one bushel of wheat. Canada will control the wheat market. I believe the Dominion plan will help Western Canada."

"The prosperity of Canada does not depend ultimately on the banks and railways, but on the character and the basic religion of its men, women and children. Men of Canada, I think you see the breaking of the dawn in 1925."

Surviving the business, financial and economic situation both in Canada and the United States, Mr. Babson affirmed that Canada was heading for better times. The re-adjustment of the country with the world, he said, was three-fourths completed, he said.

The facts on which he based his assertion, he said, were: That business failures for the first eight months of 1924 showed a 25 per cent decrease, compared with the corresponding period of 1923; failures, with liabilities, had decreased 10 per cent; exports had increased 10 per cent; imports decreased 10 per cent; wage index was down five per cent; and building and commodity prices were down from 6 to 20 per cent.

Postal Strike Was Expensive

Postmaster-General Says Strike Cost Canada \$399,000

Toronto.—Canada's loss by the postal strike last summer was \$399,000, says Hon. Charles Murphy, Postmaster-General, in reply to the Canadian Federation of Postal Employees, following an interview held in the office of the minister on September 11, with the Federation's representative of 19 men who had been let out. In addition, Mr. Murphy says, there was further loss occasioned by the financial charges and to the public because of the dislocation of the service.

Will Remain Neutral

Powers Announce They Are Not Interfering in Warfare In China

Peking.—The foreign legations have been notified by the Chinese Foreign Office and to General Chang Tso-lin, war lord of Manchuria, disclaiming any intention of interfering in the present hostilities between Chang and the Peking Government. The memorandum, however, stated that should forced lives be lost and property destroyed, the Chinese authorities responsible would be held to account.

More Harvesters Needed

Winnipeg.—There is a known shortage of more than 2,000 harvest workers in Saskatchewan, according to H. W. Brewis, of Regina, representing the Saskatchewan Branch of the Labor Employment Service of Canada, and in five days here Mr. Brewis has been able to recruit only 100 men in his efforts to relieve the shortage.

Commercial Negotiations Not Broken

London.—The department of foreign affairs issued a statement explaining that the Anglo-German commercial negotiations had not broken down, as reported. It was stated that the negotiations will be resumed shortly, the statement added, with every prospect of a satisfactory conclusion.

The Secret of Successful Baking

consists very largely of choosing a baking powder whose leavening qualities are uniformly reliable.

Magic Baking Powder is the powder that never fails you. This is the reason why it is by far the most popular baking powder in Canada.

MAGIC BAKING POWDER

WORLD HAPPENINGS BRIEFLY TOLD

Minister of the Interior Russell denies the reports of civil war in Bulgaria. He says the country was never so tranquil.

Germany, in the near future, will make an effort to enter the League of Nations on an equal footing with other powers, it is announced officially.

The Dominion Government refunding law broke all records when the subscription books were closed Sept. 22, when the total offering of fifty million dollars was over-subscribed.

All Russian citizens are required to pay special taxes to relieve the impending food shortage under the terms of a decree issued by council of people's commissars.

Donald B. MacMillan, the Arctic explorer, intends to devote his attention for some time to Northern Labrador going north probably next June, it is announced.

The Imperial Aviation Society has announced plans for flights by Japanese aviators across the Pacific Ocean, and from Japan to London and possibly around the world for next year.

The closing date of the British Empire Exhibition at Wembley has been fixed for Saturday, November 11. The question as to whether the exhibition shall be re-opened next year is still undecided.

Hon. Thomas A. Law leaves for the West Indies early in December to carry out an investigation into the possibilities of further developing trade relations between the Indies and the Maritime Provinces.

Prof. Wagner head of the Berlin Telegraphic Technical Institute, claims the discovery of a method of making it possible to send messages over trans-oceanic cables at the rate of 100 letters per second compared with the present maximum of 200.

Trade Treaty with Netherlands
A trade treaty has been signed between Canada, and the Netherlands whereby each nation accords the other the most favored national treatment. The new treaty, which is much akin to that recently arranged between the Dominion and France, merely awaits the approval of the Parliament of both countries before becoming operative.

Want Livy's Manuscript
The famous Livy's Manuscript, discovered on the island of Egeri by Prof. Alexander Fraser, is being sought by British and United States publishers, according to reports in circulation. It is said an offer of a million dollars has been made for it. The manuscript is said to contain a description of the founding of Carthage.

Mononites Buy Land
It is mentioned that during the past three weeks no less than 25,000 acres of farm lands in Saskatchewan and Alberta have been sold to the newly-organized Mononite Land Settlement Board for the placement of Mononites expected to arrive shortly in Western Canada.

Prolonging Human Life

German Scientist Has Predicted Next Great Scientific Achievement
Men in the prime of life now will have a chance to live 1,000 years, according to Prof. Fritz Haber, eminent German scientist, who was in Philadelphia attending the centennial celebration of the Franklin Institute. Professor Haber, who is director of the Prussian Academy of physical and chemical sciences, in an interview, expressed his positive opinion that the next great scientific achievement would produce such a result.

He declared that science would bring forth the discoveries that would produce a race of supermen, who may expect to live as long as a thousand years through elimination of the causes of natural death.

Polishing his finger at the interviewer, who is under 20, he exclaimed, "You will see it."

Hardly less impressive from the strictly scientific point of view was another opinion of Doctor Haber's that science will never be able to create life. He is confident, however, that the achievement of prolonging life from the present expectation of 70 to 100 years, and that the centuries will be accomplished by scientists now laboring.

Insulin, the discovery which is at last helping the medical profession in the fight against diabetes, has been the first step, Haber said, and is the concrete example that principle and science, which scientists are working to prolong life is fundamentally sound. This prolongation of life, according to the professor, will come through a method of purifying all the various types of enzyme, the organic or chemical duty of which is to split the molecules and rides in the human system. An enzyme is an organized or chemical compound of vegetable or animal origin that causes chemical transformation.

Corns Removed By Foot Bath

Take a minute night and morning to apply Putnam's Corn Extractor. Follow later by a hot foot bath, and off drops the corn. The Corn Extractor brings that glorious feeling—it stops the pain and it is to split the corn. You will find it absolute perfection. See this in use. Take only "Putnam's." Sold by all drug stores.

PUTNAM'S Corn Extractor
Importation Under Preference

Large Percentage of Goods Come From Britain Under Extended Preference Arrangement

An overwhelming percentage of the goods imported into Canada, in the year ended April 30th last under the extended preference arrangement with Great Britain, by which an additional discount of 10 per cent. would be guaranteed on goods imported by a Canadian, had their advantage of that concession and came into Canada through their own ports and were handled over the Canadian preference arrangements. The total imports to be affected by the enlarged preference was \$71,743,275 and of that total \$46,214,121, or 64.4 per cent. of the total, was of the additional discount provided for.

More Butter and Cheese Consumed
Measurable Increase Is Noted In Consumption of Both Butter and Cheese in Canada

According to the Dominion Bureau of Statistics, the consumption of both butter and cheese in Canada is increasing measurably. During 1921 the consumption of butter was 228,510,667 pounds or 25.79 per cent. This increased in 1922 to 224,277,559 pounds or 25.14 pounds per capita. In 1923 consumption was 231,038,723 pounds or 27.45 pounds per capita. Cheese consumption rose from 22,085,846 pounds in 1921 to 23,862,097, or 1923 or from 2.51 pounds per capita to 2.12 pound.

A Corrobor of Pulmonary Troubles
Many times a cough can be presented showing the great efficacy of Dr. Thomas' Electric Oil in correcting disorders of the respiratory processes, but the best testimonial is experience and the Oil is recommended to all who suffer from these disorders with the cough, cold, croup, whooping cough, who will find relief. It will ally inflammation in the bronchial tubes.

Increase in Mineral Production
Metallic mineral production in Canada during the six months ending June, 1924 showed a 20 per cent. advance over the value reported for the corresponding period in 1923, according to the half yearly report just issued from the Bureau of Statistics.

There are 35,500 forest acres every year in the United States and more than seven million acres are burned. The loss of over \$10,000,000, according to a report of the United States Forest Service.

Mindard's Liniment for Sprains and Bruises

A Trip to the Far North

Surveyor Returns From Journey to Barren of Northland
O. H. Blanchet, Director of Survey, Ottawa, is back from the wide of the barren lands, after a lengthy trip by canoe through a country which is "terra incognita" to most men, and is now but little touched even by the natives.

He left Edmonton on June 3, travelling by the same train which took Judge Dubuc and the judicial party to the Eskimo murder trial, and which carried, incidentally, the largest party of northbound passengers that has ever gone out on one train.

Completing first the survey of Great Slave Lake, commenced in 1921, Mr. Blanchet and his party, 15 in all, headed north and east into the barren lands to survey the area contiguous to the big chain of lakes from which the Compagnie du Lac, Yellowknife, and lost other northern rivers drain the area lying from Great Slave north to the Arctic, and northeast to the shores of Hudson Bay.

Forts of caribou were seen and at Fort Reliance, on the return journey, a party, led by Jim Horne, a known explorer and resident of the barren lands, and Capt. Critchell-Ball, proceeding for the hunt of the caribou and the muskox to take pictures and to study the habits of these nomads of the northern barrens.

New Motor Trails

Highway Being Marked From Canada to Alaska

A new international motor highway to cross the border into the Central Canadian prairies, will be the North and South Pike, a route known to the Canada to Kansas route. The result of negotiations that have been in progress for some time, known as the Board of Trade of Regina and Charles Lee Hyde, of Pierre, S.D., general manager of the Pike, has been decided to continue the mark of the highway from Portia, N.D. to Regina, a distance of some 300 miles, this route will be carried further north as far as Prince Albert in time for the opening of next year's tourist season.

The completion of this marking next year will give a direct north and south highway from the state of Kansas, across Nebraska, South Dakota, North Dakota, to the northern limits of population in Saskatchewan, some 1,200 miles.

The route will connect the principal American transcontinental highways enroute, and furnish a direct access for motorists of the U.S.A. into the great prairie pleasure lands of Canada.

The Regina Board of Trade has recently opened up a new route to Terry, Montana, where connection is made with the Yellowstone Trail, giving an air-line road to the National Park.

Alternative Pipes Add To Smokers' Satisfaction

"If you are a heavy smoker," says an old-time pipe expert, "you will find it real economy and pleasure to keep your pipe filled with DRIER. The reason for these alternative pipes is obvious. When one pipelet is finished, the other should be held aside and a fresh and cool pipe, charged with good tobacco—like Macdonald's DRIER—should be started at once. Filling up a hot pipe and using it again, even with so excellent tobacco as DRIER, does not do justice to the pipe or to the smoking satisfaction possible to be derived from 'The Tobacco with a heart.'"

Pipes should be kept cool to start and the best way to insure this is to keep several pipes in use and a plentiful supply of that favorite DRIER.

Gift To University

University of British Columbia Receives Sum Providing For Scholarships

Hon. W. N. Nicol, Lieutenant-Governor of British Columbia, has made a gift of \$18,000 to the University of British Columbia, to be used in providing three scholarships annually for a period of five years to enable university graduates to pursue studies in the French universities. The value of the French subject is stated to be the bringing about of a closer understanding between the British and French races in Canada.

Sugar Beet Refinery
A form of notes regarding the establishment of a sugar refinery at Portage la Prairie is being circulated in consultation with which has been prepared from a canvas with farmers' names and acreages of sugar beets which they might plant.

Will Use Medicine Hat Title
The Medicine Hat City and District Company has received a contract for some thousands of tons of fuel for use in the reconstruction of the Lake Louise Chateau.

BEAUTIFY IT WITH

"DIAMOND DYES"

Perfect home dyeing and tinting is guaranteed with Diamond Dyes. Just dip in cold water to tint soft, delicate shade, or boil to brighten, permanent colors. Each 15-cent package contains directions so simple any woman can dye or tint lingerie, silks, ribbons, skirts, waists, dresses, coats, stockings, sweaters, draperies, coverings, hangings, everything new.

Buy "Diamond Dyes"—no other kind—and you can decide whether the material you wish to color is wool or silk, or whether it is linen, cotton, or mixed goods.

Deplores Newspaper Publicity

World Restrict By Law Too Great
Publicity Before Court Trial Too

"There is one thing that I deplore, and that is that great newspaper publicity before trial, and some restriction on this should be imposed by law," declared Chief Justice Martin at the opening of the civil court at Montreal. The Chief Justice said that publicity before trials should be restricted to official statements by the police and Crown Attorney. "This would in way interfere with the freedom of the press, he declared. Publicity should be delayed until the trial had opened, so that the official instruments of justice may have a chance to operate. The Chief Justice said that public sympathy or hostility towards an accused person might influence a jury in its determination of guilt.

The Chief Justice also conjured Chief Justice Martin, "if imposed, must, or, because, be balanced by full publicity at the trial itself. That would assure a judicial system adapted to the public need and safe for the public good—limitation of publicity before the trial, accompanied by complete publicity at the trial itself."

Clark's Beans With Pork

Why spend time and fuel preparing home-made beans, when you can have them with Pork which is ready in five minutes? See this in use. "Let the Clark Kitchens help you."

Ten Million Cigarettes Seized

Dominion Government Lotes Huge Sum Through Loss of Taxation
A few days ago the Customs officials at Brockville, forwarded to Ottawa about ten million cigarettes of American manufacture, which had been seized at that point.

These ten million were collected in the space of a little over two months. These ten million on the subject called for attention from five hundred million to seven hundred million cigarettes smuggled from the United States into Canada, replacing an equal quantity of cigarettes of Canadian manufacture.

The seizure made at Brockville during the past two months would seem to indicate that this estimate is, if anything, below rather than above the mark.

Five hundred million cigarettes brought unlawfully into Canada represents a loss in tax to the Dominion Government of the huge sum of \$2,655,000.

Fort McMurray Salt Industry

The salt industry plant at Fort McMurray is expected to commence shipping its products during this month. The salt vein which has been encountered is eighty-four feet thick and was reached at a depth of five hundred feet.

Hiding and lawn tennis are the favorite recreations of Princess Mary of England.

"CHOLERA INFANTUM" THE FATA DISEASE OF CHILDREN

MOTHERS SHOULD USE
D. F. FOWLER'S
DIET OF
OLD
STRAWBERRY

This valuable preparation has been used for the last 100 years, and has no equal for offsetting the vomiting, purging and diarrhoea of cholera infantum.
Put up only by The T. Millers Co., Limited, Toronto, Ont.

SUNDAY SCHOOL LESSON

THE CHOICE OF THE TWELVE

Golden Text: Freely ye receive, freely give. Matthew 10:1.
Lesson: Matthew 10:1-4.
Devotional Reading: Isaiah 40.

The Text Explained and Illuminated

1. The Twelve Disciples Sent on a Mission Tour, verse 1. Jesus has already chosen, the twelve disciples, and now he sends them out two by two, as Mark tells us, that they might prepare the way for Him and also that they might have training for their future work. He gave them authority over unclean spirits, to cast them out, and to heal all kinds of sickness. If the Names of the Twelve, verses 2-4. The number twelve was suggested by the number of Jewish Patriarchs. The apostles were to be the patriarchs, or spiritual ancestors, of the new Israel (dumplings). There are four complete lists of the Apostles: Mt. 10:2-4; Mk. 3:16-19; Lk. 6:14-16; and Acts 1:13. All 12 are always present; that of the second, Philip; that of the third, James; and that of the fourth, Andrew. The order of the remaining three in each group is the same, the first group is always Peter; that of the second, Philip; that of the third, James; and that of the fourth, Andrew.

2. The Twelve Disciples Sent on a Mission Tour, verse 1. Jesus has already chosen, the twelve disciples, and now he sends them out two by two, as Mark tells us, that they might prepare the way for Him and also that they might have training for their future work. He gave them authority over unclean spirits, to cast them out, and to heal all kinds of sickness. If the Names of the Twelve, verses 2-4. The number twelve was suggested by the number of Jewish Patriarchs. The apostles were to be the patriarchs, or spiritual ancestors, of the new Israel (dumplings). There are four complete lists of the Apostles: Mt. 10:2-4; Mk. 3:16-19; Lk. 6:14-16; and Acts 1:13. All 12 are always present; that of the second, Philip; that of the third, James; and that of the fourth, Andrew.

Valuable Publications

Information On All Subjects Relating To Farming

The Publications Branch of the Department of Agriculture will send free of charge any of the four hundred bulletins dealing with a wide range of subjects, embracing every phase of farming activity. The wide-awake agriculturist is no longer satisfied with any list or miss plan of operation, and he is in order to move with full measure of success, he must keep himself informed. Experiments are being conducted continually at the experimental farms located at different points throughout Canada, and much valuable data is being gathered by the agriculturalists in charge of these institutions. This knowledge, together with other information gathered from many sources, is brought to the farmers through the medium of bulletins. In another column of this issue there appears an announcement headed "Farmers' Bulletin and How to Obtain Them." Cut out this advertisement, using the coupon for the bulletins, the subject of which you particularly require information. No postage is needed in mailing your request.

Painful and perfect in their action, the Farm Fumblers are always a safe and reliable remedy for children who show symptoms of worms. These symptoms are easily recognizable in a child, as they are in the adult, frequently in convulsions. A point of importance is that after Miller's the worms, the stomach and bowels are returned to a very healthy condition.

Where the Atmosphere Ends

French Astronomer Figures It 540 Miles Beyond Earth's Surface
The French astronomer, who estimates the atmosphere extends about five hundred and forty miles beyond the earth's surface. Up to about ten miles above the surface, the atmosphere contains mainly oxygen, nitrogen, carbonic acid and a few rare gases. At a height of ten miles, the weight of fifty miles, nitrogen is the predominant constituent. This region has no storms or wind. Above this layer, extending to one hundred miles or more, is another layer, mostly of hydrogen. At this point scientists had always believed the atmosphere and, according to the French astronomer still another dense layer of unknown composition stretches some 400 miles.

Avon River of Death
The Avon River, made famous by Shakespeare, has been called the "river of death," because of the great loss of sewage from the town of Coventry. Plant life has ceased to grow in it, fish have died and all vegetation along the banks is disappearing.

Manitoba Butter For England
The first lot of butter, containing 55 pounds each, of creamery butter, has been received by Manitoba from England. The value of the shipment is approximately \$10,000 and will be the second consignment of unsalted butter to be exported overseas from this province.

Many have been relieved of corns by Hough's Corn Remover. It has power of its own that is really effective.

Belgian For Canada

A thousand of Belgians are waiting to cross the Atlantic to Canada, as soon as the Dominion can assimilate them," according to the statement of A. A. Bawson, Canadian Pacific Railway passenger agent for Belgium.

Few Suicides in Canada

Health Conditions Affare Are Generally Good, According to Report
No suicides were recorded in Canada during the month of July, while in the United States there were 9.2 suicides for every 100,000 people.

Canadian health conditions generally are, according to the report, exceptionally good. The death rate for July was equivalent to 7.6 deaths per 1,000 persons. This rate is accounted for by the comparatively frequency of diseases of a chronic nature, such as diabetes, heart disease and neuritis.

One way to prevent seasickness is to remain on shore.

The girl who has a way with her generally has a man with her.

Right—The Earl of Leitrim, photographed above the Canadian Pacific S.S. "Montclair". Top left—Dr. Swartzlander, and Dr. Holt, one of the many local attractions.
Below—Barrister Kelly.

THE Earl of Leitrim, who has been spending a vacation on this side of the Atlantic, passed through Montreal on his return home, sailing last week by the Canadian Pacific steamer "Montclair". The Earl is greatly interested in the development of the country as a tourist resort, and has been interested to find that part of Ireland bears so much resemblance to Maine and New Brunswick—with wooded hills running up to about two thousand feet high and streams and lakes full of fish. The Earl, who is rapidly settling down to normal life, has recently received a considerable influx of tourists, there being excellent hotels such as that at Rosapenna, which has its own golf course, its own fishing for trout and salmon, and a beautiful bathing beach of golden sand and four miles long with waters warmed by the gulf stream. Rosapenna is a great favorite with artists and writers. George Russell (better known as "A.E.") and John Macauliffe, being among the number of those who have painted or written about its beauties.

People are apt to think that the north-west coast of Ireland is inaccessible, but as a matter of fact the Earl says he has frequently motored from Belfast to

Rosapenna in five hours. The roads are being improved and motor traffic in Ireland is on the increase, particularly now that so many Canadians and Americans are taking their own cars with them to the Old Country. The Earl of Leitrim who has crossed Canada before this is much interested to see the development of Canadian tourist resorts. He was particularly struck by the tremendous crowds he found at the Clatskanie Festival, in Quebec. It will be a long time, he says, before Dunsmuir has such a large number of visitors as the very comfortable and surprising visitors from this side by the convenience they offer—Rosapenna, for instance, having suites of rooms with private bath.

Owing to the greater ease in securing labor, the rates are also not so high as on this side—only can get very fair accommodation with meals included for five dollars a day, and this provides the opportunity for excellent salmon fishing in season.

Another erroneous opinion, according to the Earl, was that it rained all the time in the West of Ireland. The average rainfall in Rosapenna is only from 40 to 45 inches a year. Visitors, he says, are too apt to think the climate of the whole of Ireland is the same as that of Killarney, which he admits is wet.
